SPORT
PIMAG®

US AND INTERNATIONAL PATENTS PENDING

The intelligent alternative to bottled water.

Nikken is recognized internationally for state-of-the-art household filtration systems that transform ordinary tap water into a great-tasting, filtered water supply.

Now we've applied the same kind of advanced technology to a compact, go-anywhere solution that can help each of us to stay healthy, save money — and save the planet.

Introducing the PiMag® Sport Bottle — for water that is good for you, practical, economical and environmentally responsible, all at the same time!

Proven filtration, minerals and alkalinity

This impressive design features a patent-pending, advanced filtration and pH-adjustment system you won't see in other bottles or compact filter units.

In independent laboratory testing, PiMag Sport Bottle filtration meets or exceeds specifications that cover the reduction of contaminants including chlorine, particulates, chloramines and more. These test standards are a widely-applied and accepted benchmark in water quality.

Why would Nikken produce a water bottle that delivers this level of performance? So that you don't have to sacrifice quality for convenience. Now you can have good-tasting, sparkling, clear water anywhere you go.

With public concern rising on the subject of what may be in our water supply, it only makes sense to ensure that what we're drinking is good for us.*

In addition, the PiMag® Sport Bottle includes proprietary Nikken pi and magnetic technology. Pi material adds natural minerals and adjusts pH value to the 8.5-9.5 range (alkaline). Ordinary water from a household tap, well, or bottle is often acidic, and this technology is intended to help counteract that effect.

Alkaline water can also help offset the oxidizing effect of many elements of the modern diet and environment.

Corrosion-protected magnetic discs are implanted in the bottle shell. These discs create a magnetic field surrounding the direction of water flow and help reduce sediment clumping.

Filtration Test Results – ANSI/NSF Standards

Particulates (clarity, sediment): exceeds standard
Chlorine reduction: exceeds standard
Chloramine reduction: exceeds standard
Taste and odor reduction: exceeds standard
Lead reduction: exceeds standard
VOCs: exceeds standard
MTBE: exceeds standard

Green technology and materials

The quality of tap water is not the only concern. Commercially bottled water is also far from an ideal source of hydration, for many reasons. One is that these products are often nothing more than expensively-packaged tap water. Another is that bottled water can be — surprisingly — less regulated or tested than what comes from the faucet, so the consumer doesn't know the level of purity.

But an equally serious problem is environmental: millions of empty plastic bottles are tossed away *every week*, waste that doesn't break down and overwhelms trash landfills.

The **reusable** PiMag Sport bottle addresses all of these issues. Its filtration technology transforms tap water into clean, filtered PiMag water at a fraction of the cost of bottled water brands.

But the most striking **green-friendly** advance in the PiMag Sport Bottle is the remarkable bottle shell. It contains **no BPA** (bisphenol) or phthalates, toxic compounds in many plastics that have been shown to leach into water. It's molded from a resin that is not only **recyclable**

*Nikken has no information on water quality regarding the water supply in your area. The contaminants or other substances reduced by this device are not necessarily in your water. Use only on municipally treated water or other supply known to be safe for drinking.

Disposable water bottles – the cost to our planet

28,000,000,000

Number of throwaway plastic bottles made per year

17,000,000

Barrels of oil consumed in manufacture of these bottles

100,000

Automobiles that could be fueled for one year on this oil

2,500,000

Tons of carbon dioxide released to atmosphere in producing the bottles

but **biodegradable**. When eventually discarded, in an active microbial environment this bottle breaks down into natural biomass that adds natural soil nutrients to our ecosystem.

A plastic bottle that reduces negative impact on the environment — that is a Nikken inspiration.

Add that impressive feat of “green engineering” to a technology that offers clean, filtered water with minerals and balanced pH, and a tremendous cost-saving compared to bottled water — and the result is the PiMag Sport Bottle. Only from Nikken!

General Specifications

Fill capacity

21 ounces / 812 ml

Filtration media

Activated carbon, zeolite

Pi material

Granular

Magnets

4,200 gauss

Filter life

Approximately 40 gallons or
3 months of average use

Up to 250 refills (estimated)

Item code
#13501

The facts on bottled water

Those who prefer to drink water that comes in a bottle (designer or domestic), might be surprised to learn where the water originates. Many popular brands of bottled water are not from mountain springs, no matter what the name may imply.

And in blind taste tests, even expensive bottled products often rank behind ordinary tap water when the labels are removed.

Another surprise may be the expense. The averaged retail price of popular bottled water products, based on a national price survey, equals \$2-\$5 per gallon.

A PiMag Sport Bottle will provide approximately 40 gallons of refills, or three months of average use, before filter replacement. Filters are available separately and the bottle is reusable — making the Sport Bottle even more economical.

Compare this to an equivalent amount of premium, commercially bottled water:

Cost Comparison	Commercially bottled	PiMag Sport Bottle	Replacement filter
Per gallon	Up to \$5.00	\$1.38	45¢
90-day period	\$200.00	\$55.00	\$18.00

PiMag pricing includes cost of tap water at less than 1¢ per gallon.

The PiMag Sport Bottle is part of the Nikken PiMag® series of water systems.

OTHER PIMAG® PRODUCTS:

Nikken PiMag® Deluxe Water System — a countertop or under counter unit that provides a supply of filtered PiMag water on demand. The PiMag Deluxe Water System is an excellent alternative to costly, complex plumbing modifications. Just turn on the faucet and you have a practically unlimited supply of fresh PiMag water.
